Component b) is an alkyl naphthalene formula condensate solfonate: in which every r is independently of hydrogen, an alkyl group or straight or branched chain alkille C1-30, preferably a C1-4 alkyl group; And every x is independently hydrogen, an alkaline metal, an alkaline earth metal, ammonium, a mono-, diet-c1-4 alkyl ammonium, a protonated ammonium formula and lignosulphobenes used in agrochemical formulations. SUMMARY OF THE INVENTION The invention generally concerns a synergistic mixture of (alkyl) duty of condensation of naphthalide formaldehyde and lignosulphobenes useful in agrochemical formulations. 1. 11. The drying can be carried out with various means, including evaporation, the idle-drying, spray drying and the like. The composition of claim 10 in which said salt soluble in water of Lignin sulfonato is sodium, potassium, magnesium, footall or ammonium salt of Lignina sulfonate. The composition of claim 9 in which at least one naphthalene condensate sulfonate is a naphthalal alkyl condensation sulfonate of the formula: in which every R is independently hydrogen, a straight or branched chain C1-30 or an alchain group ; Each X is independently hydrogen, an alkaline metal, an alkaline earth metal, ammonium, a mono-, tri-c1-4 alkyl ammonium, or a fraction of hydroxyalkyl ammonium mono-, of- or tri-c1-4 , en is 1-25. 8. Composition according to claim 9 wherein the relationship between component a) at least one lignimal solfonate, EB) at least one naphthalide formaldehyde condensate sulfonate is in the range from about 5:95 to 95: 5 to 100% Activate concentration . Context of the invention for the invention And the condensed naphthalene sulfonates are both used as dispersants in agricultural formulations, specifically concentrated suspension, Sosponions, dispersible granules in water and wet powders. Detailed description of the invention The present invention relates to a composition of improved dispersion agent useful in the agricultural industry. More specifically, it was discovered that the performance of the most illustrated Lignina sulfonates of the naphthalna has increased when the solutions of the two are mixed and co-spray dried instead of mixing together as individual dust or added as individual solutions to the formulated product. The suspension of the suspension concentrates has been measured using the CIPAC MT161 method. 7. That mixture is mixed up to the homen. 16. The free flowing powder of the invention is obtained by mixing an aqueous solution of component A) and B), followed by a drying step. The concentrate according to claim 17 wherein said dispersion agent is present at an amount from about 1.0 to 20% based on the weight of the composition. 19. 17. The composition of claim 9 in which at least one liginal sulfonate is a soluble salt in Lignina sulfonato water. The liquid if powered in hydrio at a rate between 10 and 20 gallons per minute.
